

Life EXPECTANCY at Birth

Life Expectancy at Birth in 2023 was 0.6 years higher than a decade ago and unchanged from 2022.

Life expectancy at birth (Years)	2013	2022	2023
 Male	80.1	80.7	80.7
 Female	84.5	85.2	85.2

Data pertain to the life expectancy at birth of the resident population (i.e. Singapore citizens and permanent residents).
 Note: Data for 2023 are preliminary. Data for 2022 and 2023 have been affected by higher mortality rates, particularly those observed in 2022, arising from the COVID-19 pandemic. They may not accurately represent the number of years individuals can expect to live, if mortality rates return to pre-pandemic levels.

Life expectancy at birth is defined as the average number of years a new-born baby might expect to live, if he or she were to experience the age-specific mortality rates of the reference period throughout his or her life.
